Report of Geological Study Tour

Geological field visit is an indispensable part of curriculum. Without field study it is difficult to understand the subject as a whole, this is why Geology is also called as Field science. The grace of this subject lies in the field hence, it is very important to understand various aspects of field training. Final year students were taken to Ramtek for geological field study. Ramtek has a very complex metasedimentary terrain shows prominent structural deformation i.e., Folds. Students were trained to handle Brunton Compass, to identify folds in the field and most important were made familiar with the general lithology of Ramtek. Students were provided with writing pad and pen for field analysis and within a week had to submit the tour report in the department. |
